

What happens to your general waste?

1

You put your non-recyclable waste in your grey bin.

2

Oldham's bin crew empty your waste into the bin wagon.

3

They take all the waste from your area to a waste facility at Arkwright street.

4

The waste is shredded and compacted into bales at a Transfer Loading Station, ready to be transported.

5

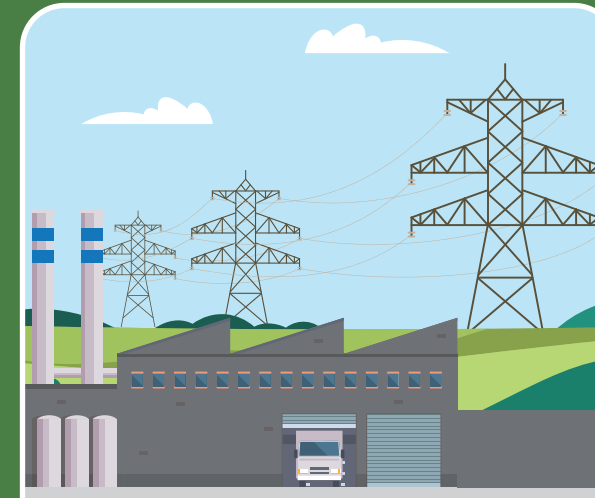

The compacted bales of waste are transported by rail to an Energy from Waste facility in Runcorn.

6

The waste is burned, it creates steam which turns a turbine to generate electricity.

7

The electricity and heat from the process is used to power the neighbouring plant and is fed back to the National Grid.

8

The waste you threw away just a few days ago is used to power your home and those across Oldham.

We dispose of your waste responsibly, but it is better not to waste in the first place.
